South Africa needs to balance the demand for water with the availability of water. There are a number of ways in which to prevent the overexploitation of water resources:

1. Removing alien vegetation
2. Interbasin transfer schemes
3. Managing groundwater supplies
4. Recycling water
5. Conserving wetlands
6. Preserving vegetation cover

FIGURE 3.3: URBANISATION

URBANISATION: LOW-COST HOUSING NOT LOW-COST ENOUGH

11 APRIL 2014, LAUREN ROYSTON, MICHAEL CLARK

There is still no formal plan to cover the need for cheaper inner-city accommodation. Approximately 60% of the South African population currently lives in urban areas. This figure will increase as a result of natural population growth and the further migration of people to cities in search of economic opportunities.

In many African countries, including South Africa, the standard government response to poverty associated with urbanisation (where people live in backyard shacks, informal settlements and 'bad' buildings) has been to focus on improving standards of living in rural areas in order to prevent rural-urban migration, and to criminalise poverty in urban areas by evicting people from their shacks and clamping down on informal livelihoods.

FIGURE 3.4: INFORMAL SETTLEMENTS

HOUSEHOLDS IN INFORMAL DWELLINGS REMAIN AT 14%

By Natasha Odendaal
18 June 2014

The percentage of South African households living in formal dwellings increased from 73.7% to 77.7%, while households living in informal housing increased 0.4 percentage points to 13.6% between 2002 and 2013. North West recorded the highest number of informal dwellings owing to the platinum belt and the extensive associated mining. It is noted that many of the informal housing structures reported were in provinces that had significant mining or industrial hubs.

FIGURE 3.5: AGRICULTURAL PRODUCTS

According to the 2012/13 export values, citrus fruit (R7 981 million), wine (R6 965 million), maize (R5 294 million), apples, pears and quinces (R5 172 million) and grapes (R4 576 million) were the most important agricultural export products.

Coal mining plays a significant role in the country's economy, as it is responsible for nearly three quarters of Eskom's fuel supply. It also supplies coal to SASOL, who produces around 35% of the country's liquid fuel.

Coal mining in South Africa is centred on the Highveld, with roughly 60% of the country's deposits located in eMalahleni (Witbank) and surrounding areas.

The Coega Development Corporation (CDC) is a state-owned entity formed in 1999 and mandated to develop and operate the Coega Industrial Development Zone (IDZ), located adjacent to the modern deep water port facility, Port of Ngqura, in Nelson Mandela Bay in the Eastern Cape. Coega's vision is to be the leading catalyst for socio-economic growth.
